

WHAT IS SALTS GONE®?

SALTS GONE® is an instantly acting salt and brine remover for boats, vehicles, Rv's and other industrial applications.

There are 3 primary components to it

1. Chelating agents for the various forms of salt (salt remover)
2. Corrosion inhibitors to prevent salt from causing further damage
3. Surfactants (premium soap)

How Does It Work?

Science! Salts Gone® works instantly through the chemical process of chelation. Salts Gone® satisfies the chemical bond of the elements that make up the various forms of salt.

More simply put, the NaCl becomes separated. Na is split from the Cl and each have a new bond.

**They will never form salt again
as they have been satisfied!**
